

SESSION-1:

Tasks

1.

Write a short paragraph in your own words defining what a 'program' is and give one real-life example from any app you use daily (like Instagram, Zomato, or Paytm).

A program is a set of instructions written in a programming language that tells a computer or device what to do. Programs are used to perform specific tasks and solve problems. For example, Instagram is a program that allows users to share photos and videos, send messages, and interact with other users.

2.

List three popular programming languages you have heard of, and for each, mention whether it is usually compiled, interpreted, or can be both.

Hint: Think of languages like Java, Python, and JavaScript.

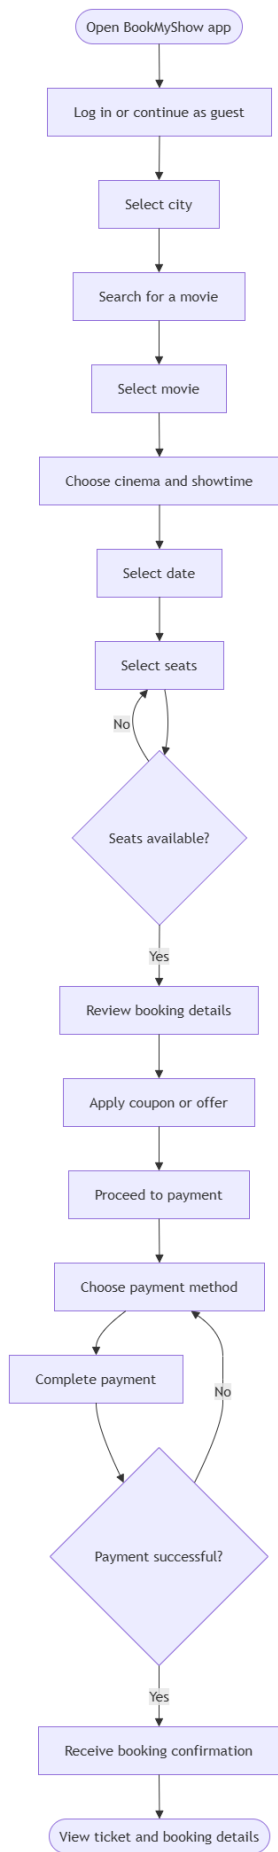

Java - Usually compiled into bytecode, which runs on the Java Virtual Machine (JVM).

Python - Usually interpreted by the Python interpreter.

JavaScript - Usually interpreted/JIT-compiled by modern JavaScript engines.

3.

Draw a flowchart (on paper or using any online tool) for the process of booking a movie ticket on BookMyShow, starting from opening the app to receiving the booking confirmation.

4.

Write down the steps (as an algorithm, using simple numbered instructions) for ordering food on Swiggy — from opening the app to completing payment.

- Start.
- Open your Swiggy app.
- Select your location.
- Choose a restaurant.
- Select your food.
- Add food to the cart.
- Open the cart.
- Check your order.
- Confirm your delivery address.
- Click **Proceed to Checkout**.
- Select a payment method.
- Make the payment.
- Payment successful → **Order placed**.
- Receive the order confirmation.
- Track your order.
- **End**.
