

SESSION-13:

Tasks

1.

Create a file called playlist.txt and write the names of your top 3 favorite songs from Spotify into it using write mode (w). with open("playlist.txt", "w") as file:

```
#include <stdio.h>
```

```
int main() {
```

```
    FILE *file;
```

```
    file = fopen("playlist.txt", "w");
```

```
    fprintf(file, "Tum Hi Ho\n");
```

```
    fprintf(file, "Perfect\n");
```

```
    fprintf(file, "Love Story\n");
```

```
    fclose(file);
```

```
    printf("Songs written to playlist.txt  
successfully.\n");
```

```
    return 0;
```

```
}
```

```
PS C:\Users\SIDDHI\OneDrive\Desktop\c> gcc session13_task1.c -o session13_task1
PS C:\Users\SIDDHI\OneDrive\Desktop\c> .\session13_task1.exe
Songs written to playlist.txt successfully.
```

2.

Open playlist.txt in read mode (r) and display each song name on a separate line in the console. with open("playlist.txt", "r") as file:

```
#include <stdio.h>
```

```
int main() {
```

```
    FILE *file;
```

```
    char song[100];
```

```
    file = fopen("playlist.txt", "r");
```

```
    while (fgets(song, sizeof(song), file) != NULL) {
```

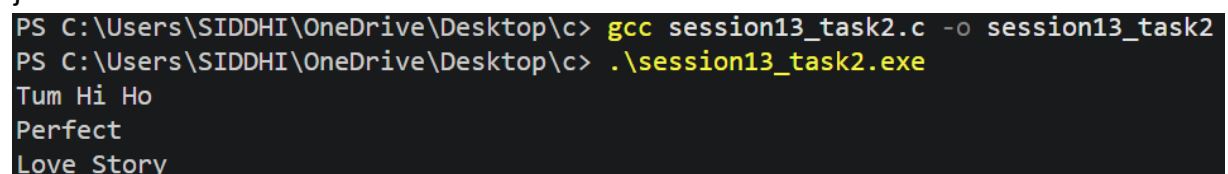

```
        printf("%s", song);
```

```
    }
```

```
    fclose(file);
```

```
    return 0;
```

```
}
```

```
PS C:\Users\SIDDHI\OneDrive\Desktop\c> gcc session13_task2.c -o session13_task2
PS C:\Users\SIDDHI\OneDrive\Desktop\c> .\session13_task2.exe
Tum Hi Ho
Perfect
Love Story
```

3.

Add two more song names to playlist.txt without deleting the existing ones by opening the file in append mode (a).

```
#include <stdio.h>
```

```

int main() {
    FILE *file;

    file = fopen("playlist.txt", "a");

    fprintf(file, "Someone You Loved\n");
    fprintf(file, "Love Me Like You Do\n");

    fclose(file);

    printf("Two more songs added successfully.\n");

    return 0;
}

```

```

PS C:\Users\SIDDHI\OneDrive\Desktop\c> gcc session13_task3.c -o session13_task3
PS C:\Users\SIDDHI\OneDrive\Desktop\c> .\session13_task3.exe
Two more songs added successfully.

```

4.

Write a program that reads all song names from playlist.txt and prints only those that contain the word 'love' (case-insensitive).

Hint: Use the 'in' keyword or equivalent string method for filtering. with open("playlist.txt", "r") as file: for song in file:

```
    song = song.strip()
```

```
    if "love" in song.lower():
```

```
        print(song)
```

```
PS C:\Users\SIDDHI\OneDrive\Desktop\C_Assignment> python task4_filter_love.py
Love Story
Someone You Loved
Love Me Like You Do
```
