

SESSION-2:

Tasks

1.

Install GCC on your computer and verify the installation by running `gcc --version` in your terminal or command prompt.

```
PS C:\Users\SIDDHI\OneDrive\Desktop\c> gcc --version
gcc.exe (Rev3, Built by MSYS2 project) 16.2.0
Copyright (C) 2026 Free Software Foundation, Inc.
This is free software; see the source for copying conditions. There is NO
warranty; not even for MERCHANTABILITY or FITNESS FOR A PARTICULAR PURPOSE.
```

2.

Open VS Code or DevC++ and create a new file named `hello.c`. Write a C program that prints 'Hello, Instagram World!' to the console.

```
#include <stdio.h>
```

```
int main() {
    printf("Hello, Instagram World!\n");
    return 0;
```

```
PS C:\Users\SIDDHI\OneDrive\Desktop\c> gcc hello.c -o hello
PS C:\Users\SIDDHI\OneDrive\Desktop\c> .\hello.exe
Hello, Instagram World!
```

3.

Identify and label the header, main function, and return statement in your `hello.c` program using comments.

```
#include <stdio.h> // Header
```

```
int main() { // Main function
    printf("Hello, Instagram World!\n");
    return 0; // Return statement
```

```
}
```

4.

Compile your hello.c file using the GCC command line (gcc hello.c -o hello) and run the output file to display the message in your terminal.

Hint: On Windows, the output file will be hello.exe; on Linux/Mac, it will be hello.

```
PS C:\Users\SIDDHI\OneDrive\Desktop\c> gcc hello.c -o hello
PS C:\Users\SIDDHI\OneDrive\Desktop\c> .\hello.exe
Hello, Instagram World!
```
